USER'S GUIDE**

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXA”, where “XXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE on-line help. Select the Help menu, and then Topics to open a list of available on-line help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the dsPICDEM™ MCLV Development Board. Items discussed in this chapter include:

- Document Layout
- Conventions Used in this Guide
- Warranty Registration
- Recommended Reading
- The Microchip Web Site
- Development Systems Customer Change Notification Service
- Customer Support
- Document Revision History

## DOCUMENT LAYOUT

This user's guide describes how to use the dsPICDEM MCLV Development Board. The document is organized as follows:

- **Chapter 1. “Introduction”** – This chapter introduces the dsPICDEM MCLV Development Board and provides an overview of various features.
- **Chapter 2. “Hardware Overview”** – This chapter describes the hardware components of the dsPICDEM MCLV Development Board.
- **Chapter 3. “Running a BLDC Motor Using Hall Sensors”** – This chapter describes how to run a sensored BLDC motor using a dsPIC® DSC device.
- **Appendix A. “Schematics and Layouts”** – This appendix provides detailed circuit schematics of the dsPICDEM MCLV Development Board.
- **Appendix B. “Electrical Specifications”** – This appendix lists the DC input and output ratings for the dsPICDEM MCLV Development Board.

# dsPICDEM™ MCLV Development Board User's Guide

## CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

### DOCUMENTATION CONVENTIONS

Description	Represents	Examples
<b>Arial font:</b>		
Italic characters	Referenced books	<i>MPLAB® IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u><i>File&gt;Save</i></u>
Bold characters	A dialog button	Click <b>OK</b>
	A tab	Click the <b>Power</b> tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
<b>Courier New font:</b>		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets [ ]	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}
Ellipses...	Replaces repeated text	var_name [, var_name...]
	Represents code supplied by user	void main (void) { ... }

## WARRANTY REGISTRATION

Please complete the enclosed Warranty Registration Card and mail it promptly. Sending in the Warranty Registration Card entitles users to receive new product updates. Interim software releases are available at the Microchip web site.

## RECOMMENDED READING

This user's guide describes how to use the dsPICDEM MCLV Development Board. The device-specific data sheets contain current information on programming the specific microcontroller or digital signal controller devices. Other useful documents are listed below. The following Microchip documents are available and recommended as supplemental reference resources:

### **MPLAB® IDE Simulator, Editor User's Guide (DS51025)**

This user's guide is a comprehensive guide that describes installation and features of Microchip's MPLAB Integrated Development Environment (IDE), as well as the editor and simulator functions in the MPLAB IDE environment.

### **Readme Files**

For the latest information on using other tools, read the tool-specific Readme files in the Readme subdirectory of the MPLAB IDE installation directory. The Readme files contain updated information and known issues that may not be included in this user's guide.

### **MPASM™ Assembler, MPLINK™ Object Linker, MPLIB™ Object Librarian User's Guide (DS33014)**

This user's guide describes how to use the Microchip MPASM Assembler, the MPLINK Object Linker and the MPLIB Object Librarian.

### **dsPIC33FJ12MC202 PIM Information Sheet (DS70314)**

This document provides device-specific information for the dsPIC33FJ12MC202 PIM device. The dsPIC33FJ12MC202 is a high-performance 16-bit digital signal controller within a small 28-pin 6x6 mm QFN package.

### **dsPIC33FJ32MC204 PIM Information Sheet (DS70316)**

This document provides device-specific information for the dsPIC33FJ32MC204 PIM device. The dsPIC33FJ32MC204 is a high-performance 16-bit digital signal controller within a small 44-pin QFN package.

### **dsPIC33FJ128MC804 PIM Information Sheet (DS70326)**

This document provides device-specific information for the dsPIC33FJ128MC804 PIM device. The dsPIC33FJ128MC804 is a high-performance 16-bit digital signal controller within a small 44-pin QFN package.

### **dsPIC33FJ12MC201/202 Data Sheet (DS70265)**

This data sheet contains device-specific information for the dsPIC33FJ12MC201/202 Digital Signal Controller (DSC) Devices. The dsPIC33F devices contain extensive Digital Signal Processor (DSP) functionality with a high performance 16-bit microcontroller (MCU) architecture.

### **dsPIC33FJ32MC202/204 and dsPIC33FJ16MC304 Data Sheet (DS70283)**

This data sheet provides device-specific information for the dsPIC33FJ32MC202/204 and dsPIC33FJ16MC304 motor control family of devices.

# dsPICDEM™ MCLV Development Board User's Guide

---

## **dsPIC33FJ32MC302/304, dsPIC33FJ64MCX02/X04 and dsPIC33FJ128MCX02/X04 Data Sheet (DS70291)**

This data sheet contains device-specific information for the dsPIC33FJ32MC302/304, dsPIC33FJ64MCX02/ X04 and dsPIC33FJ128MCX02/X04 motor control family of devices.

## **dsPIC33FJXXXMCX06/X08/X10 Data Sheet (DS70287)**

This data sheet contains device-specific information for the dsPIC33FJXXXMCX06/ X08/X10 motor control family of devices.

## THE MICROCHIP WEB SITE

Microchip provides online support via our web site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com), click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers and other language tools. These include the MPLAB C17, MPLAB C18 and MPLAB C30 C compilers; MPASM™ and MPLAB ASM30 assemblers; MPLINK™ and MPLAB LINK30 object linkers; and MPLIB™ and MPLAB LIB30 object librarians.
- **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB ICE 2000, MPLAB ICE 4000 and MPLAB REAL ICE.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debugger, MPLAB ICD 2.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows® Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB SIM and MPLAB SIM30 simulators, MPLAB IDE Project Manager and general editing and debugging features.
- **Programmiers** – The latest information on Microchip programmers. These include the MPLAB PM3 and PRO MATE® II device programmers and the PICSTART® Plus and PICKit™ 1 development programmers.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://support.microchip.com>

## DOCUMENT REVISION HISTORY

### **Revision A (July 2008)**

Initial release of this document.

---

---

## Chapter 1. Introduction

---

---

The dsPICDEM MCLV Development Board is targeted to control a Brushless DC (BLDC) motor or Permanent Magnet Synchronous Motor (PMSM) in sensor or sensorless operation. This flexible and cost-effective board can be configured in different ways for use with Microchip's specialized motor control digital signal controllers. The dsPICDEM MCLV Development Board supports the dsPIC33F motor control device family. It offers a mounting option to connect either a 28-pin SOIC device or a generic 100-pin Plug-In Module (PIM). The board also has a three-phase inverter bridge circuit. The circuit drives a BLDC or PMSM motor using different control techniques without requiring any additional hardware. Topics covered include:

- Overview of the dsPICDEM MCLV Development Board
- Features Overview

### 1.1 OVERVIEW OF THE dsPICDEM MCLV DEVELOPMENT BOARD

Figure 1-1 shows a simplified block diagram of the dsPICDEM MCLV Development Board. A dsPIC33F device uses the gate driver to drive the three-phase inverter that powers the motor windings. The board includes various circuitry to perform the following functions:

- Measure the feedback signals (e.g., voltage, current, Hall sensors and Fault signals)
- Communicate with a host computer or an external device via CAN, LIN, USB or RS-232 interface
- Drive a three-phase inverter

It also provides the option to interface Hall sensors or a Quadrature Encoder for sensed commutation.

The dsPICDEM MCLV Development Board supports motors with terminal voltage up to 48V and current up to 15A. Refer to **Appendix B. "Electrical Specifications"** for more information on electrical specifications.

### 1.2 FEATURES OVERVIEW

The key features of this board include the following:

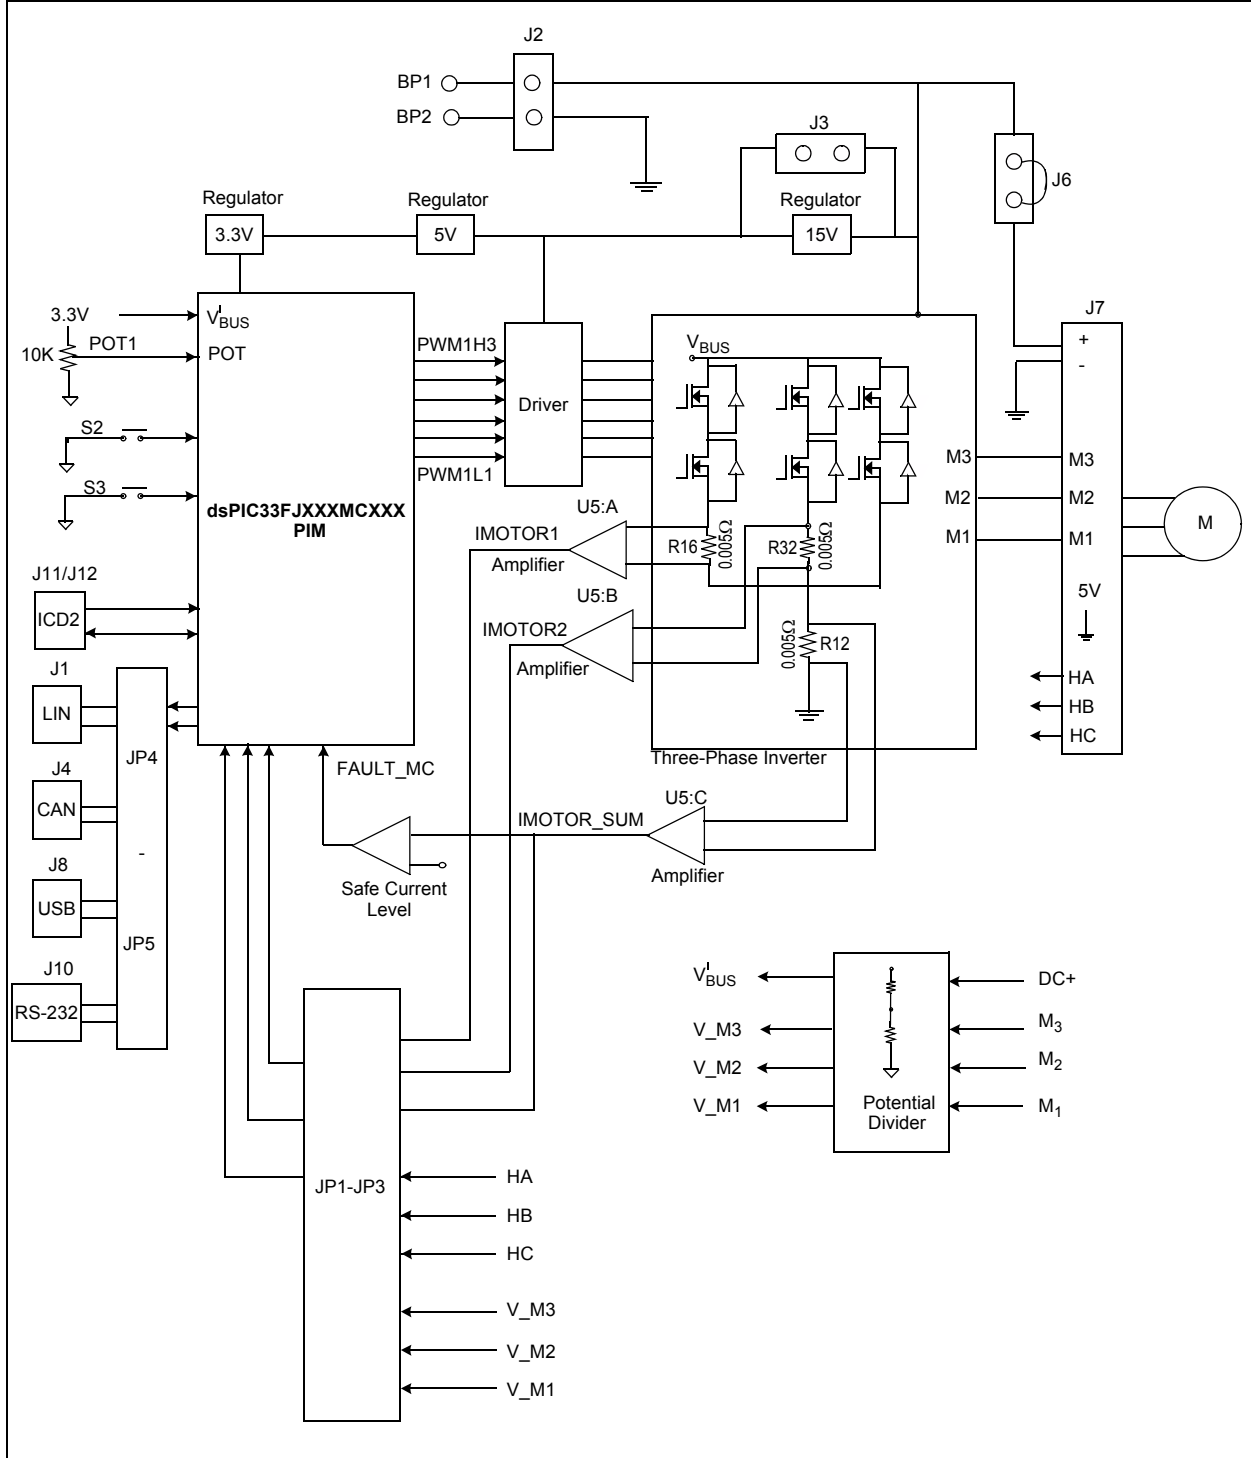

- Devices Supported:
  - 28-pin to 100-pin dsPIC33FJXXXMC202 PIM (MA330014) with a dsPIC33F Motor control device (U9) socket
  - 44-pin to 100-pin dsPIC33FJXXXMCX04 PIM (MA330017 and MA330018) with a dsPIC33F Motor Control device (U9) socket
  - 100-pin to 100-pin dsPIC33FJXXXMCX10 PIM (MA330013) with a dsPIC33F Motor control device (U9) socket
  - The dsPIC33FJ12MC202 Motor Control device in SOIC package (U2) footprint

# dsPICDEM™ MCLV Development Board User's Guide

---

- Motor Control Interfaces:
  - Three-phase inverter bridge with a power rating of 48V/15A (J7)
  - Hall sensors/Quadrature encoder interface for sensed motor control (J7)
  - Phase voltage feedback for sensorless BLDC operation
  - DC bus current sense resistor for single shunt vector control
  - Phase current sense resistor for dual shunt vector control
  - Overcurrent protection
- Input/Output Control Switches:
  - Two push buttons (S2 and S3)
  - Reset push button (S1)
  - 10 k $\Omega$  potentiometer (POT1)
  - LED indicator for PWM outputs
- Communication Ports:
  - CAN interface port (J4)
  - LIN interface port (J1)
  - UART communication via USB (J8)
  - UART communication via RS-232 (J10)
- Power Supply Connectors:
  - Auxiliary Power Tab Fast-On connectors (BP1 and BP2) for the controller and power stage
  - 24V power input connector (J2) for the controller
  - Dedicated power input connector (J7) for the power stage
- Programming Connectors:
  - ICSP™ connector for programming a dsPIC DSC device (J12)
  - RJ11 connector for programming a dsPIC DSC device (J11)
  - ICSP connector for programming the PIC18LF2450 USB to UART Bridge (J9)

---

NOTES:

---

---

## Chapter 2. Hardware Overview

---

---

This chapter describes the hardware components of the dsPICDEM MCLV Development Board. Topics covered include:

- PIM Configuration
- Board Connectors
- User Interface Hardware

A +24V power supply connected to the Power Connector terminal (J2) or Auxiliary Power Tab Fast-On Connector terminals (BP1-BP2) supplies power to the control circuits and DC bus of the board. It is recommended that you use a 24V power supply listed as an accessory (Part Number AC002013) on the Microchip web site ([www.microchip.com](http://www.microchip.com)).

The various components on the board receive the power as follows:

- The Gate drivers receive +15V power from a 15V regulator.
- The CAN driver receives +5V power from a 5V regulator.
- The LIN driver receives VBAT power from the LIN connector J1.
- A dsPIC33F motor control device receives +3.3V power from a +3.3V regulator.
- The RS-232 UART interface receives +3.3V power from a +3.3V regulator.
- The PIC18LF2450 USB to UART Bridge receives +3.3V power from a +3.3V regulator.

**Note 1:** If the input voltage value is less than 16V, remove the 15V voltage regulator and short jumper J3.

- 2:** To use a higher DC voltage bus (24V-48V), complete the following steps:
- a) Connect the power supply to jumper J7, and keep jumper J6 open.
  - b) Power the circuit components, MCU, and the gate drivers using a separate 16V-24V power supply connected to the power connector J2 or BP1-BP2.

### 2.1 PIM CONFIGURATION

This section summarizes the resistor configuration required to connect the PIM pins to dsPIC DSC pins. The following PIMs can be configured on the dsPICDEM MCLV Development Board:

- dsPIC33FJ256MC710 PIM (MA330013)
- dsPIC33FJ12MC202 PIM (MA330014)
- dsPIC33FJ32MC204 PIM (MA330017)
- dsPIC33FJ128MC804 PIM (MA330018)

**Note:** When using PIMs, make sure that the 28-pin SOIC dsPIC DSC is removed from the dsPICDEM MCLV Development Board.

The tables that follow describe the PIM configuration details.

## 2.2 BOARD CONNECTORS

Table 2-5 describes the hardware connection between MPLAB ICD 2 or MPLAB REAL ICE™ In-Circuit Emulator, the power supply, and the dsPICDEM MCLV Development Board connectors.

**TABLE 2-5: BOARD CONNECTORS**

Number	Designator	Description
1	BP1-BP2	Auxiliary power supply connector
2	J1	LIN interface port
3	J2	Input power supply connector
4	J4	CAN interface port
5	J7	Motor power connector, Hall sensors/Quadrature encoder connector and DC bus power supply connector
6	J8	USB interface port
7	J9	ICSP™ programmer interface connector for programming the PIC18LF2450 USB to UART Bridge
8	J10	RS-232 interface port
9	J11	RJ11, 6-pin connector for programming a dsPIC® DSC device
10	J12	ICSP connector for programming a dsPIC DSC device

Figure 2-1 shows various connectors and jumpers available on the dsPICDEM MCLV Development Board.

**FIGURE 2-1: dsPICDEM™ MCLV DEVELOPMENT BOARD CONNECTORS AND JUMPERS**

## 2.2.1 Input Power Connector (J2, BP1-BP2)

The dsPICDEM MCLV Development Board receives the power for control circuits and the DC bus from a +24V power supply. It is connected to the board through J2 or BP1-BP2 points.

## 2.2.2 DC Bus Power Supply Connector (J6 and J7)

By default, jumper J6 is short, and the +24V input power supply connected to J2 or BP1-BP2 supplies the DC bus voltage to the board.

## 2.2.3 CAN Interface (J4)

The board has a MCP2551 High-Speed CAN Transceiver, which is connected to the dsPIC33F device through jumpers JP4 and JP5. The CAN transceiver converts the differential signal on the CAN bus to a digital signal for the ECAN™ module. It also converts the ECAN output digital signal to a differential signal for the CAN bus. In Sleep mode, the CAN transmitter is turned off, and the receiver operates at a lower current level. The control device monitors the CAN activity and switches the transceiver back to normal operation when needed. For more information, refer to the data sheet, *MCP2551 “High-Speed CAN Transceiver” (DS21667)*.

## 2.2.4 LIN Interface (J1)

The board has a MCP2021 High-Speed LIN Transceiver, which is connected to the dsPIC33F device through jumpers JP4 and JP5. The LIN transceiver monitors the LIN bus, conditions the incoming signal, and passes it to the UART module on the control device. The LIN transceiver responds to a "Transmit Enable" from the control device by conditioning an output signal and placing it on the LIN bus. A power-down mode turns the transmitter and voltage regulator off, leaving only the receiver and wake-up circuits in operation. The LIN circuit includes a Master/Slave jumper to accommodate a Master node on the LIN bus. For more information, refer to the data sheet, *MCP202X "LIN Transceiver with Voltage Regulator"* (DS22018).

## 2.2.5 USB Interface (J8)

The board uses an on-board PIC18 interface as a bridge between the UART and USB. The PIC18 UART pins are connected to the dsPIC33F device through jumpers JP4 and JP5.

## 2.2.6 ICD 2 Connector (J11- J12)

The ICD 2 Connector is an RJ11 female connector (J11) that connects the MPLAB ICD 2 In-Circuit Debugger to the dsPIC33F device for programming and debugging purposes. The ICD 2 can be connected to the board using 6-pin ICSP connector (J12).

## 2.2.7 ICSP for PIC18 (J9)

The jumper J9 is a 6-pin connector that connects the PICkit™ 2 development programmer to the PIC18F device. The board uses the on-board PIC18 interface as a bridge between the UART and USB. The PIC18F can be programmed for USB communication.

## 2.2.8 RS-232 Connector (J10)

The connector J10 is an RS-232 interface port. The board uses the UART connector to pass the UART signals from the dsPIC33F device to the dedicated UART IC MAX3232CUE. The output of U14 is provided to the connector J10.

## 2.2.9 Motor Connector (J7)

The motor connector (J7) has 11 terminals. Table 2-6 shows the functionality of each terminal.

**TABLE 2-6: MOTOR CONNECTOR DETAILS**

Pin	Terminal Name	Function
1	+	External DC bus power supply
2	-	Ground
3	M1	Motor winding phase 1
4	M2	Motor winding phase 2
5	M3	Motor winding phase 3
6	G	Ground
7	+5V	Hall sensors/Quadrature encoder power supply
8	GND	Hall sensors ground
9	HALLA	Hall A/QEA feedback
10	HALLB	Hall B/QEB feedback
11	HALLC	Hall C/INDEX feedback

Table 2-7 lists the test points that can be used to check various signals.

**TABLE 2-7: TEST POINTS**

Test Points	Description
HA	Hall A/QEA feedback
HB	Hall B/QEB feedback
HC	Hall C/INDEX feedback
PWM1H1	PWM output for leg 1 top switch
PWM1L1	PWM output for leg 1 bottom switch
PWM1H2	PWM output for leg 2 top switch
PWM1L2	PWM output for leg 2 bottom switch
PWM1H3	PWM output for leg 3 top switch
PWM1L3	PWM output for leg 3 bottom switch
Fault	Fault pin
V1	Motor phase 1 voltage feedback
V2	Motor phase 2 voltage feedback
V3	Motor phase 3 voltage feedback
Ref	2.5V reference for current feedback
POT1	POT signal
MONITOR_1	Motor feedback signal 1
MONITOR_2	Motor feedback signal 2
MONITOR_3	Motor feedback signal 3
I1	Phase 1 current
I2	Phase 2 current
IBUS	Bus current
P1	+3.3V
P2	GND
P3	+5V
P4	AVss
P5	+15V

# dsPICDEM™ MCLV Development Board User's Guide

## 2.3 SELECTING A POWER SUPPLY FOR THE dsPICDEM MCLV DEVELOPMENT BOARD

The following connectors and power jumpers, when configured, offer multiple power supply configuration options for the dsPICDEM MCLV Development Board.

- Input Power Connector (J2 or BP1-BP2)
- Bypass 15V Regulator (J3)
- DC Bus Power Supply Jumper (J6)
- Motor Power Connector with pins, '+' and '-' (J7)

To locate these components, refer to Figure 1-1. Table 2-8 describes how to select the required power supply configuration option by setting jumper J3 and J6:

**TABLE 2-8: JUMPER SETTINGS FOR SELECTING A POWER SUPPLY**

J3	J6	J2 or BP1-BP2	J7: Pins '+' and '-'
Remove the jumper	Remove the jumper	16V to 24V	0V to 48V
Remove the jumper	Install the jumper	16V to 24V	Supplied by J2 or BP1-BP2
Install the jumper <sup>(1)</sup>	Remove the jumper	10V to 16V	0V to 48V
Install the jumper <sup>(1)</sup>	Install the jumper	10V to 16V	Supplied by J2 or BP1-BP2

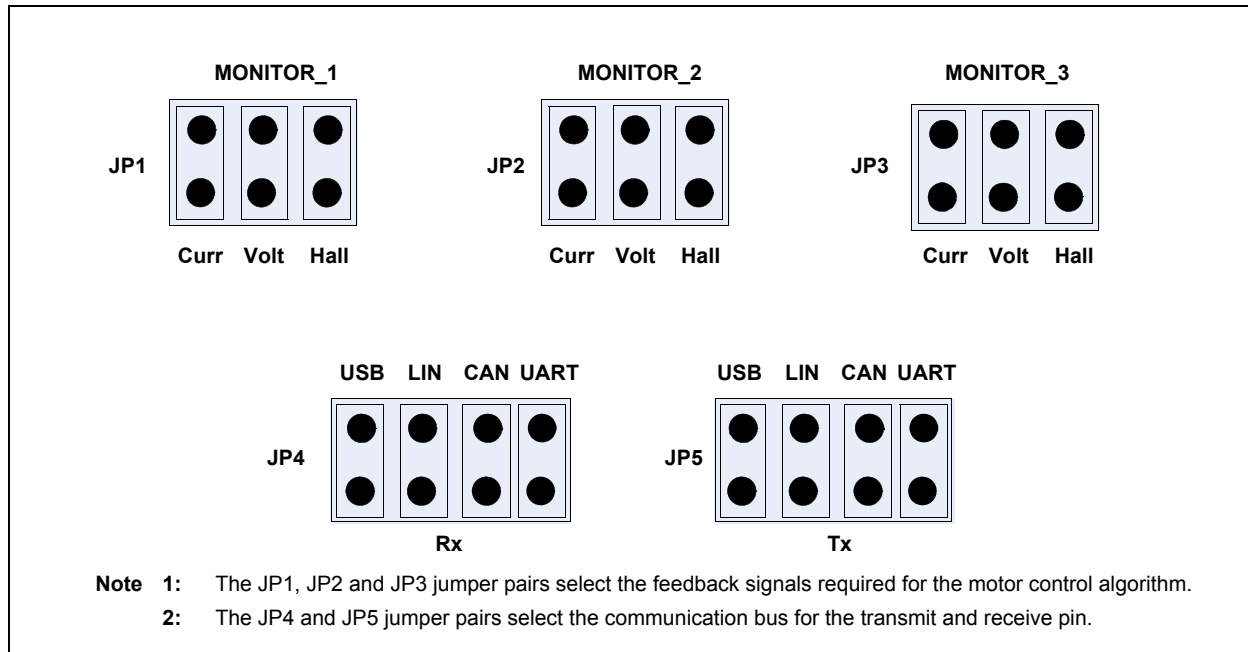

**Note 1:** When J3 is installed, VR3 must be removed to avoid damage to the 15V regulator.

## 2.4 USER INTERFACE HARDWARE

### 2.4.1 Jumpers

The dsPICDEM MCLV Development Board has nine jumpers that configure the functionality of the board. Figure 2-2 shows the jumper settings and Table 2-9 lists these jumpers and their functions.

**FIGURE 2-2: JUMPER SETTINGS**

**TABLE 2-9: JUMPER DESCRIPTIONS**

No.	Designator	Position	Description
1	JP1	1-2	Connects current sense phase 1 to MONITOR_1
		3-4	Connects voltage sense phase 1 to MONITOR_1
		5-6	Connects Hall sensor interface HA to MONITOR_1
2	JP2	1-2	Connects current sense phase 2 to MONITOR_2
		3-4	Connects voltage sense phase 2 to MONITOR_2
		5-6	Connects Hall sensor interface HB to MONITOR_2
3	JP3	1-2	Connects current sense DC Bus to MONITOR_3
		3-4	Connects voltage sense phase 3 to MONITOR_3
		5-6	Connects Hall sensor interface HC to MONITOR_3
4	JP4	1-2	Connects USB receive line to Rx
		3-4	Connects LIN receive line to Rx
		5-6	Connects CAN receive line to Rx
		7-8	Connects UART receive line to Rx
5	JP5	1-2	Connects USB transmit line to Tx
		3-4	Connects LIN transmit line to Tx
		5-6	Connects CAN transmit line to Tx
		7-8	Connects UART transmit line to Tx

**TABLE 2-10: ADDITIONAL JUMPERS**

Designator	Functions
J3	Bypass 15V regulator connector for gate driver IC
J5	LIN master select
J6	Connects BP1-BP2/J2 to motor connector block J7
JP11	CAN end enable

## 2.4.2 Push Buttons, LEDs, Bus Resistors and Potentiometers

The dsPICDEM MCLV Development Board consists of the following items:

- Two push buttons
- One potentiometer
- Six LEDs
- Two power-on status LEDs
- Two USB LEDs
- Device Reset push button

**TABLE 2-11: INDICATORS AND HUMAN INTERFACES**

Label	Hardware Element Description
S2, S3	Push buttons; these push buttons are connected to port pins. When momentarily pressed, the switch connects the respective port pin to Ground.
POT	10 k $\Omega$ potentiometer; it is connected to analog input pin.
D3	Power-on status LED, which indicates the status of the 5V regulator.
D4	Power-on status LED, which indicates the status of the +3.3V regulator.
D8	USB communication indicator, which indicates the device has been detected.
D10-D15	LEDs, which indicate the PWM pin status.
D16	USB bus indicator, which indicates that the device is connected to the USB bus.

---

## Chapter 3. Running a BLDC Motor Using Hall Sensors

---

This chapter describes how to set up the dsPICDEM MCLV Development Board to run a BLDC motor using Hall sensors.

Refer to the application note, AN957 “*Sensored BLDC Motor Control Using dsPIC30F2010*” (DS00957), for more information about running the BLDC motor control using Hall sensors. Topics covered include:

- Hardware Requirements
- dsPICDEM MCLV Development Board Setup

### 3.1 HARDWARE REQUIREMENTS

To set up and run the board, the following items are recommended:

- dsPICDEM MCLV Development Board (DM330021)
- 24V power supply (AC002013) or equivalent
- 10 pole Hurst motor (AC300020)
- dsPIC33FJ32MC204 PIM (MA330017)

### 3.2 dsPICDEM MCLV DEVELOPMENT BOARD SETUP

The following procedure describes how to set up the dsPICDEM MCLV Development Board:

#### WARNING

**Note 1:** The dsPICDEM MCLV Development Board is intended to drive the three-phase BLDC or PMSM motor. Before connecting the motor, make sure that the power rating of the motor is equal to or less than the power rating of the board, as shown in **Appendix B. “Electrical Specifications”**. Also, make sure the jumper settings are correct for the firmware programmed into the target dsPIC DSC device mounted on the socket. Failure to comply with this warning could lead to malfunction of the board and the motor, and could result in physical harm.

**2:** Before beginning the start-up procedure, complete a visual check of the board and the motor for connectivity and mechanical damage. If damage is found, DO NOT power-up the board. Otherwise, you may further damage the equipment. Contact Microchip’s local office or distributor immediately.

1. Place the dsPICDEM MCLV Development Board on a sturdy insulated platform.
2. Make sure that the dsPIC33FJ32MC204 device or an appropriate PIM is mounted in the respective socket.

# dsPICDEM™ MCLV Development Board User's Guide

3. Connect the 24V power supply to J2 or BP1-BP2.  
If the supply voltage is not equal to 24V, refer to Table 2-8 to configure the power supply for the board.
4. Set JP1, JP2 and JP3 in the 5-6 position to select Hall sensors feedback.
5. Connect MPLAB ICD 2 or MPLAB REAL ICE In-Circuit Emulator to the computer, and the board to J11 or J12.
6. Connect the three-phase, 10 pole, 24V Hurst motor (AC300020) to J7. Connect motor phases and Hall sensors as described in Table 3-1.

**TABLE 3-1: PHASES AND HALL SENSORS CONNECTION**

Color Coding	J7 Connection	Component	Hurst Motor Connection
4-pin power (white connector) wires	—	—	Power connector on the Hurst motor
Red wire	M1	Motor phase 1	Pin 3
Black wire	M2	Motor phase 2	Pin 2
White wire	M3	Motor phase 3	Pin 1
Green wire	G	Body Ground	Pin 4
8-pin Hall sensor (black connector) wires	—	—	Hall interface connector on the Hurst motor
Red wire	+5V	Hall sensor power	Pin 1
Black wire	Gnd	Hall sensor return	Pin 2
White wire	HA	Hall A output	Pin 4
Brown wire	HB	Hall B output	Pin 3
Green wire	HC	Hall C output	Pin 5

7. Download the code for the dsPIC33FJ32MC204 from the Microchip web site ([www.microchip.com](http://www.microchip.com)). It is available with the application note AN957.
8. Unzip the file and open the project using MPLAB IDE. Refer to the “MPLAB® ICD 2 In-Circuit Debugger User's Guide” (DS51331) for more information about how to generate a project and run a program using the MPLAB ICD 2 In-Circuit Debugger.
9. Build the project and download the program into the processor.
10. Press the **Run** icon when in Debug mode.
11. Press S2 to run the motor.
12. Vary the motor's speed with POT1.
13. Press S2 again to stop the motor.

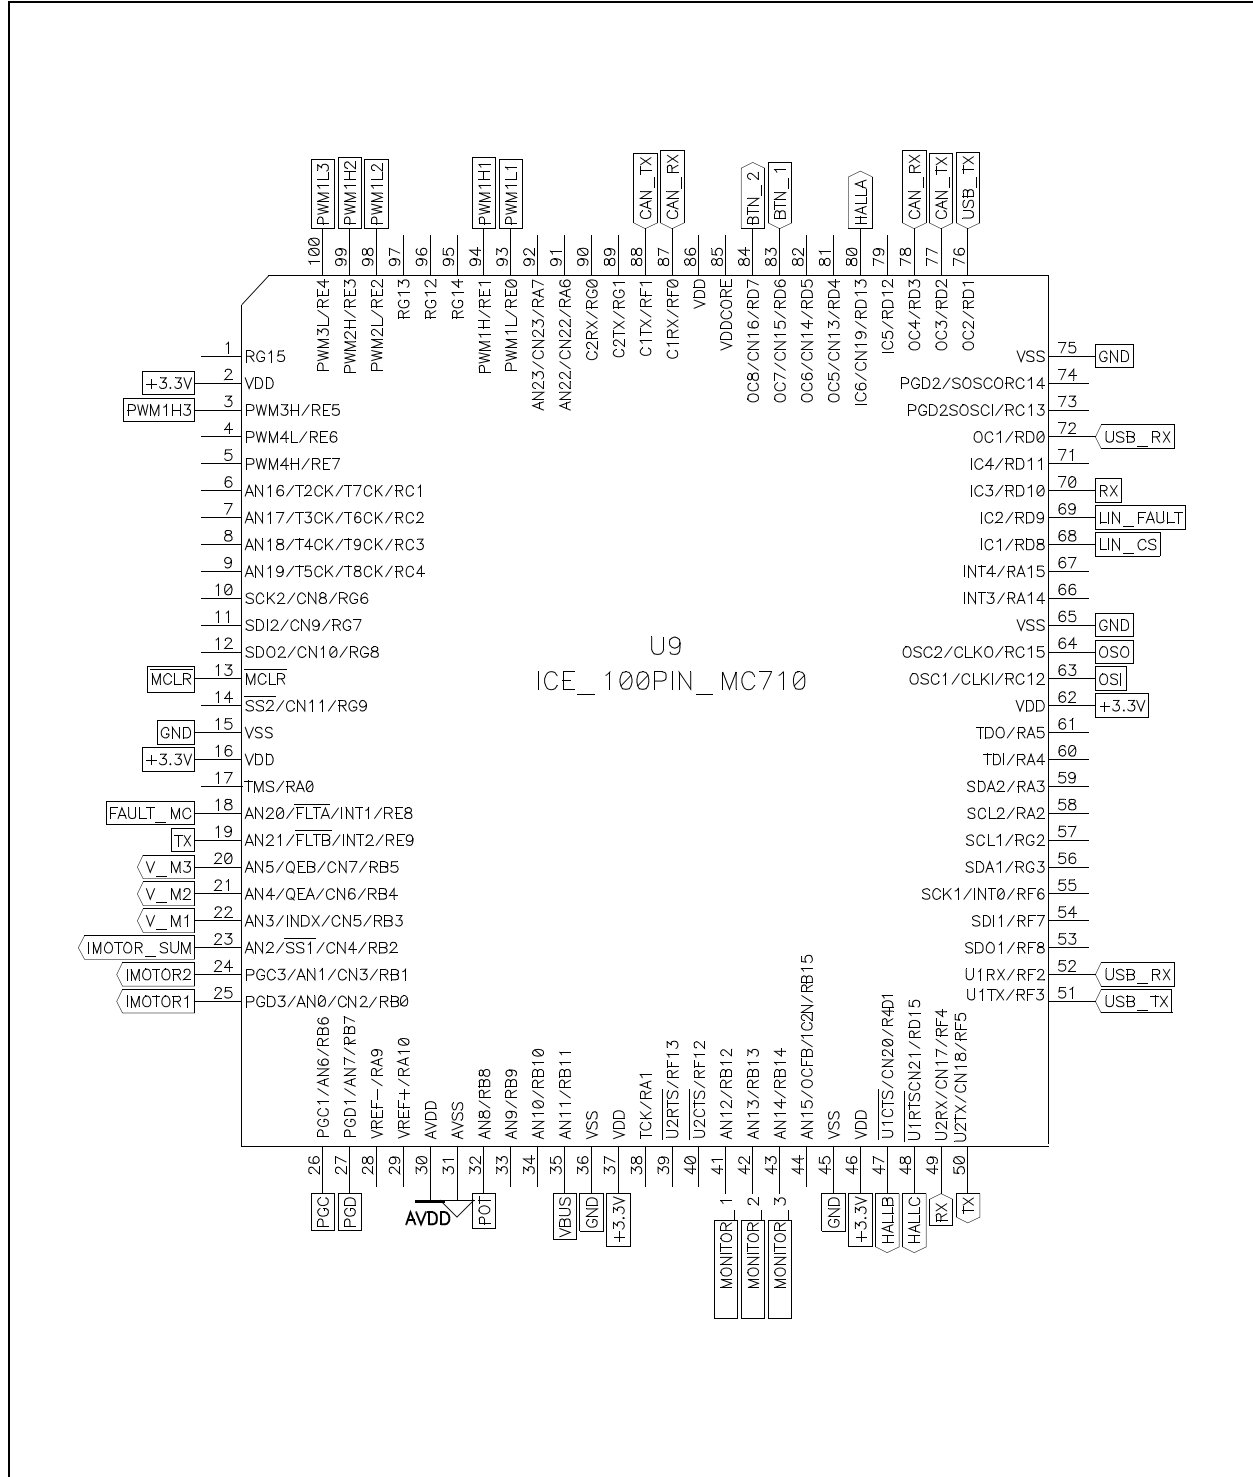

**Note:** For more information on running BLDC motors using dsPIC DSC devices, refer to the following application notes, which are available from the Microchip web site:

- AN957, “Sensored BLDC Motor Control Using dsPIC30F2010” (DS00957)
- AN1160, “Sensorless BLDC Control with Back-EMF Filtering Using a Majority Function” (DS01160)
- AN1078, “Sensorless Field Oriented Control of PMSM Motors using dsPIC30F or dsPIC33F Digital Signal Controllers” (DS01078)
- AN1017, “Sinusoidal Control of PMSM Motors with dsPIC30F DSC” (DS01017)

The source code referred in these application notes is also available from the Microchip web site ([www.microchip.com](http://www.microchip.com)).

## Appendix B. Electrical Specifications

**TABLE B-1: DC INPUT RATING**

Parameter	Condition	Min.	Max.	Unit
Power supply connected to J7	J6 is open	0	48	VDC
Power supply connected to J2 or BP1-BP2	J3 is open and VR3 is installed	16	24	VDC
Power supply connected to J2 or BP1-BP2	J3 is installed and VR3 is removed	10	16	VDC

**TABLE B-2: DC OUTPUT RATING**

Parameter	Min.	Typical	Max.	Unit
Voltage	0	24	48	VDC
Current	0	10	15	A
Power Rating	0	240 <sup>(1)</sup>	720 <sup>(2)</sup>	Watts

**Note 1:** If the output power exceeds 240W, the power MOSFETs (Q1-Q6) may need additional heat sink.

**2:** By default, the board uses D2-PAK Power MOSFETs. It also supports the TO-220 packages. If the TO-220 Power MOSFETs are used, additional heat sink can be mounted on the MOSFETs, if required.
